

CYBERNETICA

Together for Personal Protective Equipment (PPE) Readiness

(Partner: Center for Medical Interoperability (C4MI, Nashville, TN, US))

In partnership with C4MI, UXP was introduced as the interoperability backbone for PPE inventory data exchange between hospitals and health systems, state health departments, the Center for Disease Control, and area stockpiles.

UXP in the TOGETHER for PPE Readiness context allows for faster and streamlined access to time-critical PPE data for efficient decision-making.
