

Unified eXchange Platform

Secure data exchange
between organisations

1

Secure data exchange
over encrypted
channels

2

Organic integration
with existing services
and business processes

3

Transparent and
fully auditable data
transactions

UXP™ is a secure data exchange platform that retains the autonomy of member entities while integrating organically with all business processes, allowing for a cost-efficient solution without compromising data integrity.

Core Components

CONTROL ACCESS

UXP Registry »

Maintains the list of UXP members and distributes it to security servers.

EXCHANGE DATA

UXP Security Server »

Forwards messages to the security server of another organisation over a cryptographically secure channel.

MONITOR OPERATIONS

UXP Monitoring »

Monitors the system health of the UXP infrastructure to discover operational issues

You Need UXP™ If:

- ✓ Your system is big with many organisations, systems and complex relationships
- ✓ Your system is dynamic with relationships that are prone to change
- ✓ Your system is mission critical with high security requirements
- ✓ Your system is decentralised with all participants retaining full control over their data and resources

UXP™ Benefits

Unified and cost efficient solution for all data exchanges

Retain control over all data and resources

Scalable, secure and domain-neutral distributed, peer-to-peer system

Transparent system for easy auditing
